NAME: GOKULAKRISHNAN AS ROLL NO :250701203

EXPERIMENT 17

Exp No:17 Experiment to understand Linear Regression for a given data set

AIM:

To understand Linear Regression for a given data set.

DESCRIPTION:

Understand the Linear regression for the dataset given.

CODE:

```
import numpy as np

import pandas as pd

df = pd.read_csv('/content/Salary_Data.csv')

print(df)

df.info()

df.dropna(inplace=True)

df.info()

print(df.describe())

features = df.iloc[:, [4]].values

label = df.iloc[:, [5]].values

from sklearn.model_selection import train_test_split

x_train, x_test, y_train, y_test = train_test_split(

    features, label, test_size=0.2, random_state=0)

from sklearn.linear_model import LinearRegression

model = LinearRegression()
```

```
model.fit(x_train, y_train)

print(model.score(x_train, y_train))

print(model.score(x_test, y_test))

print(model.coef_)

print(model.intercept_)

import pickle

pickle.dump(model, open('SalaryPred.model', 'wb'))

model = pickle.load(open('SalaryPred.model', 'rb'))

yr_of_exp = float(input("Enter Years of Experience: "))

yr_of_exp_NP = np.array([[yr_of_exp]])

Salary = model.predict(yr_of_exp_NP)

print("Estimated Salary for {} years of experience is {}".format(yr_of_exp,
Salary[0][0]))
```

OUTPUT:

```
       Age  Gender    Education Level             Job Title  \
0     32.0    Male         Bachelor's      Software Engineer
1     28.0  Female           Master's           Data Analyst

 Enter Years of Experience: 45
 Estimated Salary for 45.0 years of experience is 375542.30210725486
```

RESULT:

Thus, a Linear Regression model was implemented successfully to predict salary based on years of experience. The model was evaluated using training and testing data, and the trained model was saved using Pickle for future predictions.
